

How to use a Soup Kettle effectively

This equipment is wet heat use only. Therefore, please **DO NOT** use it while the outer container is dry.

Please follow the instructions carefully.

INSTRUCTIONS:

1. Pull out the soup container/inner can.
2. Fill the outer container with 600ML cold water.
3. Insert the food container into the water can and set your temperature dial.
4. Keep the cover on always when you are not serving to keep your soup/food piping hot. The geometric design of the cover will allow the ladle handle out while your food remains covered.
5. Check your water levels regularly during the service.
